**2.**

## **Time & Place:**

**2:00-4:00 pm**

**Google Meet**

## **Department:**

**Computer Engineering**

## **No of participants:**

**47**

The guest lecture on "NoSql queries" was organized by Department of Computer on 24<sup>th</sup> FEB 2022. It was our great pleasure that the guest lecture was conducted by Ms. Varsha Wangikar who is working as an assistant professor in A.P. Shah Engineering college. She has 20 years of experience in the academics. Her area of expertise is DBMS, MongoDB, Mysql, Machine learning.

The guest lecture for Database management system was conducted for Second year students of computer department. The students experienced hands-on session on NoSql queries. As curriculum of database management system includes Sql queries but Nosql queries are not there in the syllabus. This topic was beyond the syllabus of DBMS which is useful for students to learn modern tools and technologies for their career in future.

## NoSQL - Intro

- ▶ Broadly Databases are classified into SQL and NOSQL.
- ▶ As the name suggests "NoSQL" denotes "Not only SQL".
- ▶ It is not a "Replacement" to SQL. But used in complementary to SQL.
- ▶ In further sections, we would learn why NoSQL?
