Time & Place:

22nd Feb,2022

10:45am to 12:30pm

**Platform: Online
(Google Meet)**

Department:

EXTC,IT,COMPS

No of participants:

120

Dr. Mansi Subhedar, IQAC Coordinator and Head, at the Department of E&TC Engineering at Pillai HOC College of Engineering and Technology, Rasayani, Maharashtra delivered a Guest lecture on “IoT and it’s applications” on Tuesday 22nd February,2022 for Third Year students of the Department of Electronics & Telecommunication. Information Technology and SE Computers
Because of COVID-19 pandemic situation the guest lecture was conducted on Google Meet online platform.

120 participants attended the session. Some of the important topics covered were Benefits of IoT, Characteristics of IoT, IoT cloud platforms, IoT Architecture, Technology behind IoT, Major Components of IoT, IoT applications, Security threats etc

The participants found it very informative and well organized. They look forward for more sessions on IoT

Signing Authority
Name and Designation

Feedback from Participants:

Conduct more sessions like this as it gives us good knowledge
Thank you Mam, for this informative session .
Have such webinars
It's very useful
Learned a lot from the session and Thank you for organizing such a good event.
Would want more of these lectures so that i can expand my knowledge further in IOT
Good Session
Useful lecture, learned lot of new ideas and information about IOT
Very detailed session
It was a great session thank you ma'am
Please organise more seminars in future
The session was very useful for us getting the information about IOT
Need More
Very informative lecture
It was wonderful session
Good
Very informative session
The session was very helpful and knowledgeable
Session was good. Looking forward for such informative sessions.
Offline would be better
Its a good session for the iot subject. Got to know more application of iot in real time.Hope for more of this kind of sessions.
Very good session for us and it will us for our final year project.
Very good session . Got to learn many things.
More such interesting sessions would be great!
Great Session
We look forward for more sessions related to IOT its protocols applications and many more domains
very informative
No comments....but the session was helpful... Thankyou
Very good session gave clear idea about IOT
plz do such kind of webinar in future.
It was a very informative session about IOT

EVOLUTION OF INTERNET OF THINGS (IOT)

Pre-Internet	Internet of content	Internet of services	Internet of people	Internet of things
"Human to human"	"WWW"	"Web 2.0"	"Social media"	"Machine to machine"
<ul style="list-style-type: none">Fixed and mobile telephonySMS	<ul style="list-style-type: none">e-mailInformationEntertainment	<ul style="list-style-type: none">e-productivitye-commerce	<ul style="list-style-type: none">SkypeFacebookYouTube	<ul style="list-style-type: none">Identification, tracking, monitoring, metering, ...Automation, actuation, payment, ...
+ smart networks	+ smart IT platforms and services	+ smart phones and applications	+ smart devices, objects, data	+ smart Data and ambient context

IOT CHARACTERISTICS

- Intelligence**
 - combination of algorithms and computation, software & hardware makes it smart.
 - Ambient intelligence in IoT enhances its capabilities & facilitates things to **respond in an intelligent way to a particular situation and supports them in carrying out specific tasks.**
 - intelligence in IoT is only concerned as means of interaction between devices, while user and device interaction is achieved by standard input methods and graphical user interface.
- Connectivity**
 - Simple object-level interactions contribute towards collective intelligence in IoT networks.
 - enables **network accessibility and compatibility in the things.**

REC Dr. Mansi Subhedar is presenting

IOT BENEFITS

Benefits of IoT

- Use of Smart Devices
- Reduction in Operational Cost
- Enhanced Security Measures
- Gathering Rich Data
- Achieve Customer-Centricity

DRAWBACKS OF IOT

Privacy Issue

- With the advancement in technology and social media, user's data is always available on the internet
- With the things being connected with the internet, hackers are provided with yet another tool to be able to **break into the network and steal the information.**
- Data being all time available, there is every possibility that your data can be misused.
- The information they are given access to **could also be misused by companies to exploit the users.**

IOT CLOUD PLATFORMS

- IoT cloud platforms do the task of **bringing together the capabilities of IoT devices and cloud platforms to perform end-to-end service.**
- IoT device has multiple sensors and it is **connected to the cloud via gateways.**
- Various devices are connected to the internet and big data is processed through IoT devices and gets connected to multiple applications.
- IoT cloud is deployed in three different ways such as SaaS (software as a service), PaaS (platform as a service), and IaaS (infrastructure as a service).
- It is built on top of the other generic clouds such as Microsoft, Amazon, Google, etc.
- IoT cloud platforms do the **task of stretching and analyzing data and process it through the cloud and devices.**

Dr. Mansi Subhedar, Suvarna Bhoir, Nancy Merciline, MERIN REJI, PRINCE GUPTA, Elkana Chandra Re..., 111 others, You

REC Dr. Mansi Subhedar is presenting

IOT ARCHITECTURE

Internet of Things Reference Model

Levels

- 7 Collaboration & Processes (Including AI/ML & Business Processes)
- 6 Application (Reporting, Analytics, Control)
- 5 Data Abstraction (Aggregation & Access)
- 4 Data Accumulation (Storage)
- 3 Edge Computing (Data Stream Analysis & Transformation)
- 2 Connectivity (Communication & Processing Units)
- 1 Physical Devices & Controllers (The "Things" in IoT)

Center

Edge: Sensors, Controllers, Machines, Intelligent Edge Nodes, of all types.

Application layer, Business layer, Application layer, Network layer, Processing layer, Transport layer, Perception layer, Perception layer

11:29 AM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, Nancy Merciline, MERIN REJI, ANSHUMAN Sharma, Elkana Chandra Re..., 118 others, You

REC Dr. Mansi Subhedar is presenting

TECHNOLOGY BEHIND IOT

- Hardware (Arduino Raspberry Pi, Intel Galileo, Intel Edison, ARM mBed, Bosch XDK110, Beagle Bone Black and Wireless SoC)
- Integrated Development Environment (IDE) for developing device software, firmware, and APIs
- Protocols [RPL, CoAP, RESTful HTTP, MQTT, XMPP (Extensible Messaging and Presence Protocol)]
- Communication (Powerline Ethernet, RFID, NFC, 6LowPAN, UWB, ZigBee, Bluetooth, WiFi, WiMax, 2G/3G/4G)
- Network backbone (IPv4, IPv6, UDP and 6LowPAN)
- Software (RIOT OS, Contiki OS, Thingsquare Mist firmware, Eclipse IoT)
- Internetwork Cloud Platforms/Data Centre (Sense, ThingWorx, Nimbits, Xively, openHAB, AWS IoT, IBM BlueMix, CISCO IoT, IOx and Fog, EvryThing, Azure, TCS CUP)
- Machine learning algorithms and software.

11:34 AM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, Nancy Merciline, MERIN REJI, SANTHOSH NAMBI..., Elkana Chandra Re..., 116 others, You

REC Dr. Mansi Subhedar is presenting

MAJOR COMPONENTS OF IOT DEVICES

- Sensors**
Collecting data
- Connectivity**
Sending data to cloud
- Data Processing**
Making data useful
- User Interface**
Delivering information to user

- Physical object with embedded software into hardware.
- microcontroller, firmware, sensors, control unit, actuators
- Communication module: Software consisting of device APIs and device interface for communication over the network and communication circuit/port(s),
- middleware for creating communication stacks using 6LowPAN, CoAP, LWM2M, IPv4, IPv6, and other protocols.

11:36 AM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, Nancy Merciline, MERIN REJI, SANTHOSH NAMBI..., Elkana Chandra Re..., 114 others, You

REC Dr. Mansi Subhedar is presenting

SENSOR TO ACTUATOR FLOW

Sensor (Thingsquare Mist) ≠ **Actuator** (MIST)

Example 1:

- Sensor:** Soil moisture sensor detects unwanted water content.
- Control center:** Sends detected value signal to the control center.
- Actuator:** Control center sends command to water pump. Water pump switched-off and halt to deliver water.

Example 2:

- Sensor:** Temperature sensor detects heat.
- Control Center:** Sends this detect signal to the control center.
- Actuator:** Control center sends command to sprinkler. Sprinkler turns on and puts out flame.

Sensor to Actuator Flow

REC Dr. Mansi Subhedar is presenting

FIRMWARE

- Firmware is a specific class of computer software that provides low-level control for a device's specific hardware
- Firmware is the low-level software operating the hardware of a microprocessor- or microcontroller-based device.
- It enables components to interact with each other and implements communications protocols
- Thingsquare Mist is an open-source firmware (software embedded in hardware) for true Internet connectivity to the IoT.
- It enables resilient wireless mesh networking.
- Several microcontrollers with a range of wireless radios support Things MIST.

11:47 AM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, MERIN REJI, Elkana Chandra Re..., Nancy Mercline, SANTHOSH NAMBI..., 112 others, You

REC Dr. Mansi Subhedar is presenting

IOT GATEWAY

- Gateways are part of the technology of IoT that can be used to **help connect IoT devices to the cloud**.
- Though not all IoT devices require a gateway, they can be used to establish device-to-device communication or **connect devices that are not IP-based and cannot connect to the cloud directly**.
- Data collected from IoT devices **moves through a gateway, gets pre-processed at the edge, and then gets sent to the cloud**.
- Using IoT gateways can **lower latency and reduce transmission sizes**.
- Having gateways as part of your IoT protocols provide an **additional layer of security by protecting data moving in both directions**.

```

graph TD
    SD[Smart devices] -- data --> SG[Smart gateway]
    SG -- data --> CDC[Cloud data center]
    subgraph CDC
        GDS[Global data analytics storage]
    end
  
```

11:54 AM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, MERIN RE-JI, Elkana Chandra Re..., Nancy Merciline, SANTHOSH NAMBI..., 106 others, You

REC Dr. Mansi Subhedar is presenting

LOW-POWER, SHORT-RANGE NETWORKS

Bluetooth

- Good for high-speed data transfer, Bluetooth sends both voice and data signals up to 10 meters.

NFC

- A set of communication protocols for communication between two electronic devices over a distance of 4 cm (1.2 in) or less. NFC offers a low-speed connection with a simple setup that can be used to bootstrap more capable wireless connections.

Wi-Fi/802.11

- The low cost of operating Wi-Fi makes it a standard across homes and offices. However, it may not be the right choice for all scenarios because of its limited range and 24/7 energy consumption.

Z-Wave

- A mesh network using low-energy radio waves to communicate from appliance to appliance.

Zigbee

- An IEEE 802.15.4-based specification for a suite of high-level communication protocols used to create personal area networks with small, low-power digital radios.

11:56 AM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, MERIN RE-JI, Elkana Chandra Re..., Nancy Merciline, SANTHOSH NAMBI..., 106 others, You

REC Dr. Mansi Subhedar is presenting

LOW-POWER, WIDE-AREA NETWORKS (LPWAN)

LPWANs enable communication **across a minimum of 500 meters**, require minimal power, and are used for a majority of IoT devices. Common examples of LPWANs are:

4G LTE IoT

- High capacity and low latency, these networks are a great choice for IoT scenarios that require real-time information or updates.

5G IoT

- Although not yet available, 5G IoT networks are expected to enable further innovations in IoT by providing **much faster download speeds and connectivity** to many more devices in a given area.

LoRaWAN

- Long-range wide-area networks (LoRaWANs) connect mobile, secure, bi-directional battery-operated devices.

11:56 AM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, MERIN REJI, Elkana Chandra Re..., Nancy Merciline, SANTHOSH NAMBI..., 106 others, You

REC Dr. Mansi Subhedar is presenting

APPLICATION LAYER

The application layer serves as the interface between the user and the device within a given IoT protocol.

Advanced Message Queuing Protocol (AMQP)

- A software layer creates **interoperability between messaging middleware**. It helps a range of systems and applications work together, creating standardized messaging on an industrial scale.

Constrained Application Protocol (CoAP)

- A constrained-bandwidth and constrained-network protocol designed **for devices with limited capacity to connect in machine-to-machine communication**. CoAP is also a document-transfer protocol that runs over User Datagram Protocol (UDP).

Data Distribution Service (DDS)

- A versatile peer-to-peer communication protocol that does everything from **running tiny devices to connecting high-performance networks**. DDS streamlines deployment increases reliability and reduces complexity.

Message Queue Telemetry Transport (MQTT)

- A messaging protocol designed for **lightweight machine-to-machine communication** and primarily used for **low-bandwidth connections to remote locations**.
- MQTT uses a publisher-subscriber pattern and is **ideal for small devices** that require **efficient bandwidth and battery use**.

11:56 AM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, MERIN REJI, Elkana Chandra Re..., Nancy Merciline, SANTHOSH NAMBI..., 105 others, You

REC Dr. Mansi Subhedar is presenting

TRANSPORT LAYER

- In any IoT protocol, the transport layer enables and safeguards the communication of the data as it travels between layers.
- Transmission Control Protocol (TCP)**
- The dominant protocol for a majority of internet connectivity.
- It offers **host-to-host communication, breaking large sets of data into individual packets and resending and reassembling packets as needed.**
- User Datagram Protocol (UDP)**
- A communications protocol that enables process-to-process communication and **runs on top of IP.**
- UDP improves data transfer rates over TCP and best suits **applications that require lossless data transmissions.**

11:57 AM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, MERIN REJI, Elkana Chandra Re..., Nancy Merciline, Aditya Waichol, 105 others, You

REC Dr. Mansi Subhedar is presenting

NETWORK LAYER

- The network layer of an IoT protocol helps individual devices communicate with the router.
- IP**
- Many IoT protocols utilize IPv4, while more recent executions use IPv6.
- LoWPAN**
- This IoT protocol works best with **low-power devices that have limited processing capabilities.**

11:58 AM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, MERIN REJI, Elkana Chandra Re..., Nancy Merciline, Aditya Waichol, 105 others, You

REC | Dr. Mansi Subhedar is presenting

APPLICATIONS OF IOT IN HEALTHCARE

- Implantable Glucose Monitoring Systems**
- Patients who suffer from diabetes can have devices with sensors implanted in them, just below their skin.
- The sensors in the devices will send information to a patient's mobile phone when his or her glucose levels get too low and will record historical data for them too.
- This way, patients will also be able to tell when they are most likely to be at risk

for low glucose levels in the future, as well as in the present.

11:59 AM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, MERIN REJI, Elkana Chandra Re..., Nancy Merciline, Aditya Waichol, 106 others, You

REC | Dr. Mansi Subhedar is presenting

APPLICATIONS OF IOT IN AGRICULTURE

- IoT Smart Greenhouse**
- Manual intervention to manage greenhouses is not effective since it leads to high labor costs and energy loss.
- a smart greenhouse is capable of monitoring and automatically controlling the environmental parameters like humidity, temperature, pressure, and light levels required for the crop's growth.
- It makes a cloud server that provides remote access to the intelligent greenhouse along with control options.
- For example, a WiFi signal can direct the sensors to switch on the lights, turn on a heater or open the window. It also provides

access to automatic irrigation facilities. Hence, smart greenhouses are an effective solution for farmers to increase crop yield without manual intervention.

IoT Smart Greenhouse

33°C | Smoke | ENG IN | 12:12 22-02-2022

REC Dr. Mansi Subhedar is presenting

IOT ATTACK SURFACE AREAS

- Devices**
 - Parts of a device where vulnerabilities can come from are its **memory, firmware, physical interface, web interface, and network services.**
 - Attackers can also take advantage of insecure default settings, outdated components, and insecure update mechanisms, among others.
- Communication channels**
 - Attacks can originate from the channels that connect IoT components with one another.
 - Protocols used in IoT systems can have security issues that can affect the entire system.
 - IoT systems are also susceptible to known network attacks such as denial of service (DoS) and spoofing.
- Applications and software**
 - Vulnerabilities in web applications and related software for IoT devices can lead to compromised systems.
 - Web applications can, for example, be exploited to steal user credentials or push malicious firmware updates.

12:20 PM | udv-gjfs-sef

Dr. Mansi Subhedar, Suvarna Bhoir, Elkana Chandra Re..., Nancy Merciline, Aditya Waichol, Rohan Kaila, 87 others, You

meet.google.com/udv-gjfs-sef

MEASURES TO PROTECT IOT ECOSYSTEM

- Integrating security at an initial phase of the design.
- Giving strong passwords or biometrics or cryptographic algorithms.
- Installing digital certificates and Public key infrastructure.
- Building a firewall between the connected devices.
- Improving Application Performance Indicator on back-end systems.
- Providing a user with unique identity management.
- Incorporating hardware security by tamper-proof devices.
- Providing strong network security by blocking unauthorized IP and ensuring all the systems are up to date.
- By patch management like continuous software updates.
- Well-skilled developers and programmers working as integrated teams.
- The Consumer must be educated to handle the IoT ecosystem efficiently.

12:33 PM | udv-gjfs-sef

MCQ – Taken on ERP

MCQ Questions

Question *	Option1 *	Option2 *	Option3	Option4	Option5	Correct Option No. (Choose only from given values) *
IoT stands for?	Introduction of Things	Internet of Things	Internet of Tracking	Interaction of Things		Option2
_____ are the characteristics of IOT	Intelligence, scalable	Security	Heterogeneity	All of the above		Option4
_____ are the types of actuators	Hydraulic, pneumatic actuators	Electrical, thermal actuators	Mechanical actuators	All of the above		Option4
What is the standard form of MQTT?	Message Queue Telemetry Transport	Message Queue Transport Telemetry	Message Queue Time Transport	None of the above		Option1
When was the actual term "Internet of Things" coined?	2000	1896	1880	1999		Option4
Which of the following is not an IoT device?	Tablet	Laptop	Arduino	Tablet		Option1
Which of the following is false about IoT devices?	IoT devices use the internet for collecting and sharing data	IoT devices need microcontrollers	IoT devices are completely safe	IoT devices use wireless technology		Option3
What is the full form of IIOT?	Index Internet of Things	Incorporate Internet of Things	Industrial Internet of Things	Intense Internet of Things		Option3
Which of the following command is used to trigger the Amazon echo IOT device?	Alexa	Hi	Bye	Hey		Option1
What IoT collects?	Device data	Machine generated data	Sensor data	Human generated data		Option2
What is the component of an IoT system that executes a program?	A sensor	A microcontroller	An actuator	A digital to analog converter		Option2
What is the full form of IDE in Arduino IDE IoT software?	Intra Defence Environment	Intra Development Environment	Integrated Development Environment	Integrated Deployed Environment		Option3

Which of the following is not a sensor in IoT?	BMP280	DHT11	Photoresistor	LED		Option4
Which of the following is used to capture data from the physical world in IoT devices?	Sensors	Actuators	Microprocessors	Micro controllers		Option1
Which of the following is not a fundamental component of an IoT system?	Sensors	Connectivity and data processing	User interface	Transformer		Option4
