Project management is often associated with fields in engineering and construction and, more lately, healthcare and information technology (IT), which typically have a complex set of components that have to be completed and assembled in a set fashion to create a functioning product.

Industry aspect to project management was organized for BE IT, COMP & EXTC students to give insights on how practical approach is driven in Industry. It was scheduled on ZOOM at 10:30 am to 12:00 noon

Speaker for session was Mr. Godfrey Gonsalves. Mr Godfrey is been working in the CRM space for more than 15 years. He has been Part of the senior management at one of the Big Four consulting firms. He is Closely associated to Software project management for around 7 years.

From start to finish, every project needs a plan that outlines how things will get off the ground, how they will be built, and how they will finish. It can involve a one-time project or an ongoing activity, and resources managed include personnel, finances, technology, and intellectual property.

- great lecture, extremely informative
- Excellent
- Would love to have more sessions like this on further topics to increase my knowledge base
- Looking forward to more such sessions from industrial experts.

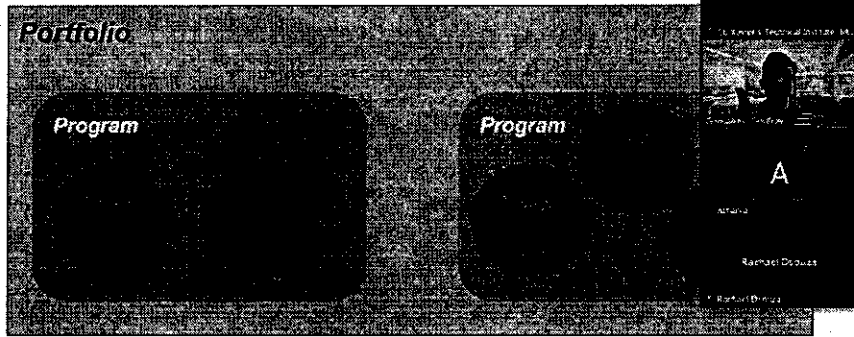

Ms. Martina D'souza
Asst.Prof., IT

Ms. Meena Ugale
HOD IT

Dr. Y. D. Venkatesh
Principal
