61

The CCNA Routing and Switching validates the skills and knowledge of any entry-level professional in the networking domain. The most common job role a person gets after the completion of this CCNA course is a network administrator. As Computer Networks get introduced to the students at SEM-5. This can be a right time to inform them with various Networking Certifications that cover beyond the Syllabus content.

The session was helpful for students to understand the industry requirements. The early stages of learning and primary/core subject to be focused for Software development Career path.
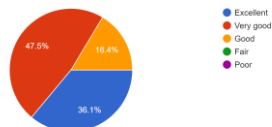

Session Highlights:

1. Understanding the requirements for Core Engineering Subjects
2. Why Networking is important in every aspect of a Software Engg career.
3. Placement Preparation
4. Resume Building
5. Internship

Session Conducted by: Mr. Sohum Khot, SDE at Zmags.
